Balsam Fir	Abies balsamea	50-70	3-5	Х			Short		Х	Χ	Х			Х	Х	X	-	Evergreen	Vulnerable to deer browse, prone to windthrow
Box Elder	Acer negundo	30-50	3-9			Х	Short	Х	Х	Х	Х	Х	Х	X			+	Drought tolerant	Weedy, structurally weak, intolerant of salt spray, messy fruit
Striped Maple	Acer pensylvanicum	15-20	3-7	Х			Short		Х		Х	X			Х	X	-	Relatively deer resistant	Intolerant of full sun
Red Maple	Acer rubrum	40-60	3-9		Х		Medium		Х	Х	Х	Х	Х	Х	Х		0	Tolerant of soil compaction/ flooding	Vulnerable to damage by deer browse, pollution & salt spray
Sugar Maple	Acer saccharum	60-75	4-8		X		Long		Х		Х	Х	Х	Х	Х	X	-	Long-lived, can use for maple syrup	Vulnerable to damage by deer browse, pollution, salt spray & drought
Ohio Buckeye	Aesculus glabra	20-40	3-7		Х		Medium	Х	Х	Χ	Х	X	Х	X	Х		+	Moderately drought tolerant	Messy fruits
Downy serviceberry	Amelanchier arborea	15-25	4-9		Х		Medium	Х	Х	Х	Х	Х	Х	Х	Х		+	Versatile, fruit provides food for birds	Vulnerable to deer browse
River Birch	Betula nigra	20-60	4-9		Х	Х	Short		х	Х	Х			Х			0	Relatively resistant to deer browse, salt spray, & soil compaction; fast growing	Short-lived, non-native, intolerant of drought
American Hornbeam	Carpinus caroliniana	20-30	3-9	Χ			Short	Χ	Х	Χ	Х	Х	Х	Х	Х	X	-	Relatively deer resistant, moderately drought tolerant	Intolerant of salt spray
Shagbark Hickory	Carya ovata	60-80	4-9	Х			Long	Х	Х		Х	Х	Х	X	Х		+	Tolerant of salt spray and drought; edible fruit	Intolerant of poor drainage
Hackberry	Celtis occidentalis	40-60	2-9		Х	Х	Medium	Х	Х	Χ	Х	Х	Х	X	Х		+	Tolerant of drought and salt spray	Highly susceptible to ice damage, structurally weak
Eastern Redbud	Cercis canadensis	20-30	4-9		Х	Х	Short		Х		Х	Х	Х	Х	Х		+	Beautiful spring flowers	Vulnerable to damage by deer browse, drought & salt; messy fruit
Flowering Dogwood	Cornus florida	15-30	5-9	Х			Long		Х		Х				Х	X	+	Relatively deer resistant; showy flowers & attractive fall foliage	Vulnerable to damage by pollution, salt spray & drought
Gray Dogwood	Cornus racemosa	5-10	3-8	Х			Short	Х	Х	Х		Х	Х	Х	Х	X	+	Shade tolerant, fruit eaten by birds	Vulnerable to deer browse
Washington Hawthorn	Cratageus phaenopyrum	20-30	3-8		Х		Long*	Х	Х	Χ	Х	Х	Х	Х	Х		+	Relatively resistant to deer browse and drought; showy flowers	Dangerous thorns, intolerant of salt spray, non-native
Kentucky Coffee	Gymnocladus dioicus	60-75	3-8		Х		Medium	Χ	Χ	Χ	Х	Х	Х	Х			+	Tolerant of drought & salt spray	Messy fruits
Eastern Red-cedar	Juniperus virginiana	40-50	3-9		Х		Long	Х	Х		Х	Х	Х	Х			0	Relatively resistant to deer browse, salt spray & drought; showy fruit	Intolerant of poor drainage
Tulip Tree	Liriodendron tulipifera	60-90	6-9			Х	Medium		Х		Х	Х	Х	Х	Х		+	Showy spring flowers, attractive fall foliage	Structurally weak, intolerant of salt spray, drought & poor drainage
Black Gum	Nyssa sylvatica	30-50	4-9		Х		Medium	Х	Х	Χ	Х	Х		Х	Х		+	Tolerant of salt spray, drought & poor drainage; showy fruit	Can develop cankers or leaf spots, intolerant of alkaline soils
Eastern Hophornbeam	Ostrya virginiana	25-40	3-9	Х			Medium	Х	Х		Х	Х	Х	Х	Х		0	Tolerant of salt spray & drought	Intolerant of poor drainage
White Spruce	Picea glauca	60-80	2-6		Х		Long		Х		Х	Х	Х		Х		-	Versatile, long-lived	Vulnerable to damage by deer browse, salt spray, drought & poor drainage

Tree Planting Recommendations

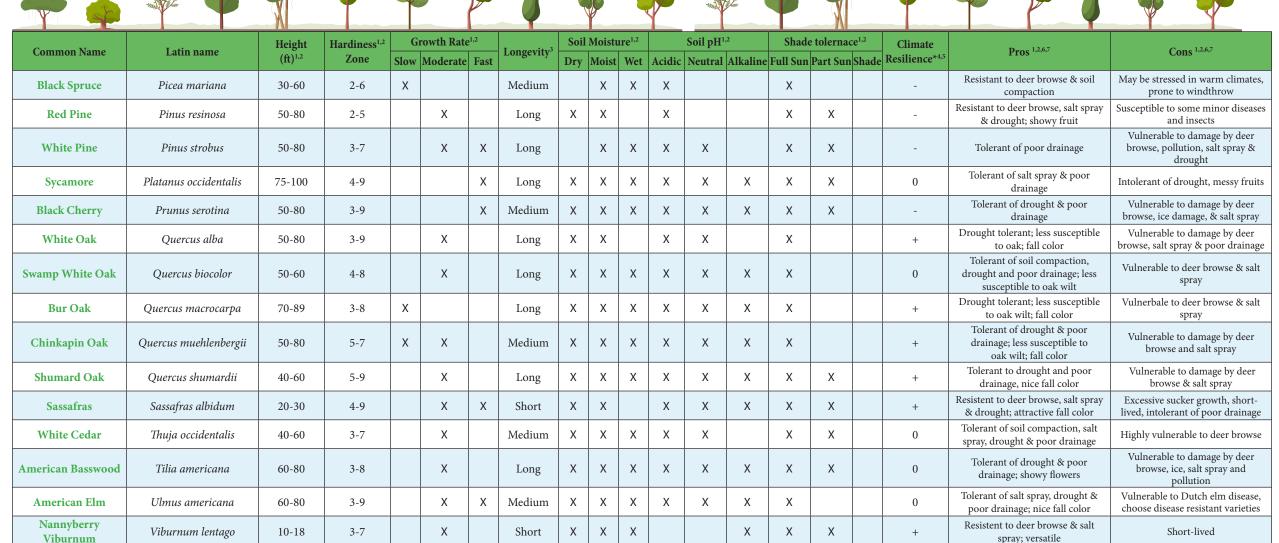

Climate Resilience Key - Predicted future climate impact on species: Positive impact (+); Negative impact (-); No impact (0)

Selecting trees:

- Purchase trees grown locally: Many nurseries stock trees that are shipped in from other regions and may not be tolerant of Michigan's weather. For lower tree mortality, source locally grown stock.
- Choose straight species: Ask for straight species (when available), not cultivars.
- Plant small: After planting, trees establish roots before expanding their canopy. It takes approximately 1 year per inch of trunk diameter to establish roots before canopy expansion.

This means that three years after purchasing a 1" diameter tree it has expanded its canopy for two years. A 3" diameter tree has taken all three years to establish its larger root system. So, over a 10-year period a tree that was smaller when planted can grow to be larger and healthier than a tree of the same species that was larger when planted. Smaller trees are also easier to handle and require less work to plant and maintain.

Planting Tips

- Spring or fall are the best times to plant. Spring allows the trees an entire growing season to establish roots and prepare for winter.
- Choose the correct soil and sun conditions for a selected species.
- Dig the hole 2 times wider than the diameter of the root ball (e.g., for a 1-foot diameter root ball dig the hole 2-feet in diameter) and only dig as deep as the root ball.
- When placing the tree in the hole, make sure the tree is straight and that the top of the root ball is level with, or slightly higher than, the surrounding soil.
- Don't add soil to the top of the root ball. Backfill the rest of the hole and sides of the root ball with the same soil taken out of the hole.
- Mulch the trees after planting to help with water retention and to prevent weeds. Don't allow mulch to touch the trunk of the tree.
- Keep the soil moist, but not saturated, the first year after planting. Adjust watering patterns to the weather.
