

How to find Patients Associated with Provider ID

First, go into your MCIR site. Under Reports, select "Profile."

Next, select the drop down for "Current immunization Profile by Provider ID."

- You will need to modify the age range (in months) for the patient population you are wishing to run the report. To run the report for VFC age patients, select at least 0 months but not yet 228 months.
- For each antigen, modify the number to 9. Entering 9 will filter out all patients that are not currently complete in the full vaccination schedule and create a list of those patients.

- Under “list people not meeting criteria,” change the drop down to “yes.” This will give you the names of the patients.
