Project Goal

To establish an Employee Engagement budget for the IT Leadership Group so that hours may be allocated to enhance & support the County's internal communication technologies.

Business Objective

To provide an employee engagement budget for technical enhancements to the County's internal communication technologies, such as the Intranet and GovDelivery.

Major Deliverables

- Project Management
- Digital Editorial Coordination / Content Scheduling
- Webpage and Content Architecture Maintenance
- Content and Communication System Training
- Graphics and Web Part Development

Approach

- Engagement increased by providing educational and entertaining information, highlighting people connecting with real people through Oakland County programs and services.
- As employee engagement digital media work is planned, the quantities available for each digital asset will be decremented and the work will be scheduled to complete the request.

Project Name: Employee Engagement Budget Project ID: DE3182EE

Research & Analysis

Gartner Research Recommendation

Research Conducted – See recommendation below and additional information attached to project.

Employees expect more from their intranet because they are accustomed to getting more from consumer websites. Employees feel more effective and productive when using up-to-date technology (see Note 1). The Web presences they rely on provide them with pertinent information and services when and where they need them. Consumer websites offer more than just push-oriented, read-only experiences — they provide users with an ability to interact with the organization running the website as well as with their peers. Users engage most meaningfully when sites and applications offer intrinsic rewards, and for most their intranet does not (see "How to Avoid the Seven Portal Pitfalls: User Neglect").

Benefits

See Return on Investment (ROI) Analysis Document

<u>Impact</u>

Number of Users 4000

Divisions All

Leadership Groups All

<u>Risk</u>

Business Environment Low – little or no impact to existing business processes

Technical Environment Low – proven and previously implemented technologies
